

WORLD ASSOCIATION OF MANUFACTURERS OF BOTTLES AND TEATS

February 2016

Safety of infant feeding bottles and teats

All members of the WBT remain, as always, fully committed to the safety of our consumers.

Keeping this in mind, the use of safe food contact approved materials in the manufacture of infant feeding bottles and teats is a top priority. This forms the basis of any new material or product development.

We are constantly looking to the relevant authorities and regulatory bodies for guidance on use of food contact approved materials and have always adhered to all relevant regulations.

WBT works closely with EU authorities to give input into the process of developing legislation to help provide safe materials and manufacturing practices.

WBT members are also involved in developing regulatory standards for infant feeding bottles and teats worldwide.
